Dear Patients, friends and neighbors,

Fall 2021

Seems like when Mother Nature changes seasons, it's like overnight, or a few days. Summer has moved on. Fall is in the air. Cool nights, smell of wood/leaves burning or changing colors. We know winter is not far behind.

Which brings up our vacation plans...We are leaving **February 9th, to return March 15th.** The usual itinerary: stopping in SC to visit, on to Savannah for a bit of history, continuing to Sebring, Sun City, and N. Ft Myers in an airbnb. Nichole will join us for a couple weeks and assist in driving back. Also a stop in Georgia to visit Marcus, in his 3rd year of chiropractic college, back in OHIO in time for spring!

Recalling 2020, back just in time for the first go-arounds of "lockdowns." Now 18 months in, **And still going on. Vaccines, masks and distancing was supposed to fix. Well... it's not working. More people die from the vaccine than from the virus. No you do not hear that on the media.** And, I expect criticism for saying. But look at the conflict of interests, and the money behind the research and the media. Plus the suppression of free speech and violation of our constitutional rights. A power grab by government and technocrats.

Consider the statistics actually reported to government agencies, i.e., the VAERS (Vaccine Adverse Events Reporting System), a voluntary system. No penalty if not reported. So it is estimated about 1% of the actual events are reported. Put the following stats into context: Senator Ron Johnson (R-Wis) has stated to Epoch Times, reported 9/24/2021, Top U.S. Health officials are ignoring or downplaying so-called Natural Immunity, or the protection that people develop after recovering from COVID-19. One concern is the huge jump in reports:

Between Jan 1, 1996, and June 30, 2021, the number of events reported following administration of flu vaccines totaled 171,732. (26 years). In the 9 months leading up to June 30, more than 701,000 such reports for COVID-19 vaccines. The number of reported deaths post-COVID vaccinations totaled 14,925 as of Sept 10. Since July 1, 1990, (31 years) there were 9,001 deaths reported following all other vaccines combined. Remember that only 1% is alleged to be reported.

On the subject of masks. Check the ["Masks are Harmful: 17 Ways Masks Cause Harm!"](#) Compare to the purported benefits. Which makes more common sense? Which seems more scientific? Would you subject your child to this?? Who is paying for the research? Follow the money. **Unbiased sources report chances of surviving covid-19 virus at over 99%. Can you say the same about surviving the vaccine?? In view of the above statistics? Again I ask, Do you trust the government? Do you trust pharmaceutical companies? Do you trust the MEDIA? Do you trust medical doctors? And are they influenced by drug reps?**

Patient Testimonials

Prior to seeing Dr. Lon, I was in an extreme state of stress, physically and mentally, due to what my Cleveland Clinic doctor referred to as Post-cardiac surgery PTSD. For me this equated to severe and frequent debilitating panic attacks, tremors, inability to cope, go outside or do much of anything other than be in a dark quiet room!

As a result of Dr. Lon's exceptional skill to "listen" with the intent to "hear," the messages my body was strongly desiring to convey, along with his kind and very compassionate demeanor, I'm better able to be in public, have significantly less panic episodes and significantly better sleep. Within the first few sessions there was a noticeable improvement and the difference is really quite amazing. I'm certain in our continued work together I will have 100% return to health and vitality.

Melody Parke

How many of your ancestors were healthy? When do you need chiropractic care? Learn about what to eat (nutrition) and what not to eat (no-trition). What is the most dangerous vaccine? A 7-year-old dachshund under chiropractic care, and do you know the differences between work and prison? All this AND MORE in this month's newsletter.

Strengthen Your Immune System with Chiropractic

Good Health is Easy; Sickness Takes Work

You are the product of hundreds of generations of strong, healthy, intelligent ancestors. Think about it—every one of your many ancestors needed to be healthy to live long enough to at least reach puberty; every ancestor needed to be attractive enough to find a mate; every ancestor needed to be smart enough to survive in this difficult world and be able to raise heirs.

You have inherited a wonderful body designed to keep you going for (believe it or not) over a hundred years in perfect physical and mental health.

Oops!

But it doesn't always seem that way. A lifetime of physical, mental and chemical stress can weaken us and cause our bodies to malfunction. One of the most serious forms of stress you can have in your body is the subluxation.

What is a Subluxation?

A subluxation is a tiny distortion in your spine that causes nerve damage. Subluxations create disharmony in your body, a precondition for sickness and disease of all kinds. Subluxations have been linked to internal organ weakness as well as abnormal stress on your muscles, cartilage and discs. Subluxations have also been linked to arthritis, spinal degeneration, lowered resistance to disease, premature aging, loss of height, unbalanced posture, weakness and pain.

Often Unnoticed for Years

Most people have subluxations and don't know it since they are often painless; you may suffer from them for years before symptoms appear. However, all the while your health is deteriorating.

Chiropractic Care

Doctors of Chiropractic specialize in locating and correcting subluxations, releasing this deep stress that has been interfering with your ability to function at your best, to heal at your best, to think at your best.

Chiropractic promotes balance, resistance to disease and improved function. That is why you'll find people with all kinds of health conditions in a chiropractor's office.

Health Optimization

Chiropractic is not just about helping us when we get sick. Chiropractic promotes wellness, wholeness and optimal function. Chiropractic patients report improved physical and emotional health, less stress and more enjoyment of life. (1-7).

Questions and Answers About Chiropractic

Question: Would I know when I need to see my chiropractor?

Answer: Subluxations are often painless; you may have one for years without knowing it. Subluxations are like cavities that need a specially trained doctor to locate and correct. Periodic check ups are the best approach.

Words of Wisdom

Not everything that counts can be counted, and not everything that can be counted counts. (Sign hanging in Einstein's office at Princeton)

The hardest thing in the world to understand is the income tax. –Albert Einstein

It is very important to generate a good attitude, a good heart, as much as possible. From this, happiness in both the short term and the long term for both yourself and others will come. –Walt Disney

The outer conditions of a person's life will always be found to reflect their inner beliefs. –Kathleen Casey Theisen

No-trition Advice

It's Always Good to Know What Foods to Avoid

All of the following commonly consumed foods are unhealthy. Why? They are highly processed, usually genetically modified, refined, unnatural and have chemicals that promote dis-ease (altered body function) that leads ultimately to disease:

- whole grain breads and crackers (avoid the wheat that's killing you)
- soy milk (highly processed, GMO, hormone disruptor)
- tofu or "veggie burgers" (non-fermented soy can be harmful to your hormones)
- orange and apple juice (loaded with much fructose that raises your triglycerides)
- skim milk or homogenized milk
- margarine (full of deadly trans-fat)
- pre-packaged "diet" dinners (usually loaded with sugar, MSG, salt and hydrogenated fats)
- protein bars (most are candy bars in disguise!)
- overly processed meal replacements (with more junk than healthy ingredients)
- rice cakes (massive blood sugar spike)
- pasta (more wheat to age you faster)
- diet ice cream or diet desserts (diet usually means synthetic sugars added such as aspartame, Splenda and loads of chemicals)
- sports or "energy" drinks (loaded with sugar and artificial chemicals)
- low-fat foods (usually replaces fat with more sugar)
- soybean oil, corn oil, canola oil, vegetable oil

For more information go to www.westonaprice.org.

Flu Vaccines Are the Most Dangerous of All

There is now a big push to create a coronavirus vaccine—to fight the Wu-flu as it's been called. It takes many months to test a vaccine for safety. The last time a flu vaccine was rushed to the market (Swine Flu in 1976) the vaccine resulted in many cases of paralysis (Guillain-Barre Syndrome) and death. Twenty-three Department of Justice (DOJ) lawyers were assigned just to handle all the lawsuits. Why the Justice Department? That's because the vaccine manufacturer refused to release the vaccine unless they were guaranteed freedom from lawsuits. The US government therefore assumed liability. (In other words, the vaccine was so dangerous that the manufacturer refused to assume liability.)

Once every 3 months the [Advisory Commission on Childhood Vaccines](#) meets and issues reports of cases settled for vaccine injuries and deaths. *Vaccine Impact* publishes these reports each quarter. [Past reports can be found here](#).

For the period 2/16/16 to 5/15/16, 206 cases were decided in the court. 116 of them were detailed in the report.

Eighty-five of the 116 cases settled were for injuries and deaths due to the flu vaccine. **The flu vaccine is now the most dangerous vaccine in the US, harming and killing more people than all the other vaccines combined.**

Sadly because MDs rarely report vaccine injuries or deaths the number given above represents a tiny fraction of the actual cases that exist. (8)

Did You Know?

Bubble wrap was originally invented as wallpaper? In 1957 engineer Al Fielding and Swiss inventor Marc Chavannes were trying to create a textured wallpaper. They sealed two shower curtains together in order to trap air bubbles. The new wallpaper didn't sell too well. But three years later a marketer got the idea that it would be a great packing material for IBM to protect its computer in shipment. And the rest, as they say, is history.

Researching Chiropractic

Chiropractic clinical case histories have been a regular feature of our patient newsletter since its inception. There seems to be no limit to the health problems that respond to chiropractic care. How many people suffering, on drugs, facing a life of limitation could be helped by chiropractic care?

Probably most of them.

Pain, weakness, numbness and tingling in the arm. Two months before starting chiropractic care a woman began experiencing radicular symptoms in the form of pain, weakness, numbness and tingling in all the fingers in her right hand.

Prior to seeing the chiropractor, the patient saw a medical doctor who took X-rays as well as prescribed anti-inflammatory medication and a steroid injection. In addition, a physical therapist was seen three times per week for finger rehabilitation. Her condition did not change.

An MRI revealed multilevel disc protrusions in her neck, spondylosis and spinal stenosis. It was recommended that she have a surgical evaluation. She refused.

After 26 visits, over a period of 100-days, improvements were observed on both X-ray and MRI along with a reduction in all her symptoms. (9)

Inability to nurse twins. Two weeks after the birth of twin girls the new mother was seen for care. She complained of an inability to initiate a let-down reflex and was not producing enough milk. She also complained of neck, shoulder pain and vasospasms (an arterial spasm restricting blood flow) in her breast.

Chiropractic examination revealed subluxations in her upper thoracic (midback) region and cranial restrictions.

Adjustments were delivered to the thoracic area (T3-T5). The mother immediately felt more sensation in her breast, specifically the nipple and areola. She also reported the ability to relax her shoulders and achieve deeper inhalation during nursing. She produced double the amount of breastmilk as she had previously. She was feeling emotionally more stable and even optimistic about maintaining her nursing schedule with the twins. An updated exam at ten months postpartum showed that she was still successfully nursing both twins. (10)

After the second visit the owner of the patient reported the dog was "totally back to normal;" he was able to do a full body doggy shake. (11)

Cauda equina syndrome in a 7-year-old dachshund. All animals with a spine can develop vertebral subluxations. Like their humans, dogs have subluxations too. In this case a 7-year-old dachshund was experiencing a decrease in appetite, defecation issues, decreased reflexes in his hind legs and could not do a full body shake. Similar symptoms occur in humans with herniated discs and it's called "cauda equine syndrome." X-rays confirmed that this dog had an L1/L2 (upper lumbar) disc herniation.

The owner described the dog as always being "a very active dog and still is. He would jump everywhere...." One day the dog started whining and would not jump onto the couch, but rather would lay on the floor and did not eat much. The dachshund had two chiropractic adjustments and all the symptoms were alleviated: hind leg reflexes returned, as did his appetite, and (to the relief of the owner) bladder and bowel control.

Humor

WORK VS. PRISON

- ◇ In prison you spend the majority of your time in an 8x10 cell. At work you spend most of your time in a 6x8 cubicle.
- ◇ In prison you get 3 free meals a day. At work you get a break for 1 meal and you have to pay for it.
- ◇ In prison you get time off for good behavior. At work you get rewarded for good behavior with more work.
- ◇ In prison you can watch TV and play games. At work you get fired for watching TV and playing games.
- ◇ In prison a guard locks, unlocks, opens and closes all doors for you. At work you must carry around a security card and unlock and open all doors yourself.
- ◇ In prison you get your own toilet. At work you have to share.
- ◇ In prison they allow you to visit your family and friends. At work you can't even speak to family and friends.
- ◇ In prison all expenses are paid by taxpayers, with no work required. At work, you get to pay all the expenses to go to work and then they deduct taxes from your salary to pay for the prisoners.
- ◇ In prison you spend most of your life looking through bars from the inside, wanting to get out. At work you spend most of your time wanting to get out and inside bars.
- ◇ In prison you can join many programs which you can leave at any time. At work there are some programs you can never get out of.
- ◇ In prison there are wardens who are often sadistic and psychotic. At work we call them "Managers."
